Working in Technology Means Expanding the Imaginations of Your Clients. And the Ones of Your Company

Cloud Integration Architect (all genders)

Parsionate advises companies, unlocks their potential and works with them to invent entirely new solutions – all on the basis of data and what it has to offer. We call this data leadership. We leverage our expertise to focus on the benefits and successes we generate for our customers and partners, which is exactly why Parsionate works end-to-end: we are by our customers' side from strategy development to full technological implementation. All this is

what our more than 200 experts are working on at our Parsionate locations across Europe. Why not join the team?

What you can expect:

- You support our customers in ensuring that the right information is available to the right people and applications at the right time to enable business processes and digital innovations

- You take responsibility to create real added value for our customers

- You will significantly support the development and expansion of the service portfolio around the topic of integration and our own reference architecture

- Your tasks include conducting customer workshops, coordinating architecture coordination and creating interface concepts and integration specifications

- You are responsible for the selection, conception and adaptation of frameworks and methods based on customer-specific requirements

- You design system architectures and integration solutions in demanding interface projects on the common cloud platforms (AWS, Azure, GCP), but also on Kubernetes or on-premises; You will also create cost estimates and project plans for implementation

- The realization of integration solutions based on the selected integration technologies and components is also one of your tasks

Your skillset:

- You have completed your studies in computer science or a comparable apprenticeship and have several years of practical experience as an IT architect (all genders)

- You bring in-depth knowledge of current working standards and practices of system architecture

- You have the ability to identify complex business and IT requirements and translate them into data and integration architecture

- In addition, you can communicate the benefits and "business value" of the solution you have designed to stakeholders

- You are well acquainted with data, system and process modeling and the various integration patterns

- You master the integration of PIM, MDM and ERP systems and web technologies such as REST, XML and JSON are no strangers to you

- You bring know-how in cloud environments like Azure and AWS, and container orchestration like Kubernetes

- Sound knowledge of commercial solutions such as Informatica PowerCenter, Talend Data Integration, TIBCO BusinessWorks, MuleSoft Anypoint or open source solutions such as Apache Camel or Apache Kafka is an advantag

- A high sense of quality and responsibility are a matter of course for you and your communication and presentation skills set you apart

- Professional language skills in English and German
